

NEW

A great energy and money saving innovation

Supplied as standard on all our chilled units at no extra cost!

Intelligent evaporation control and tray unit.

- Intelligent water detection unit with automatic switching on and off as needed.
- Water entering the evaporation tray creates a full circuit connection between our dual sensor probes enabling evaporation mode.
- After water evaporation is completed unit returns to off mode.
- Effective during standby mode.

setting the standard

Water enters evaporation tray and completes circuit connection between the sensor probes.

counterline 
setting the standard

Unit evaporates water which breaks connection between sensor probes and then switches off automatically.
